

Ayushman Bharat Yojana : Scanty release of funds

'Janabadi' Bureau Review

India's health infrastructure has collapsed due to the second wave of corona. Starting with the hospital, many patients have died due to lack of oxygen, ICU beds and ventilators. Meanwhile, Prime Minister Narendra Modi's Ayushman Bharat Pradhan Mantri Jan Arogya Yojana (PMJAY) has made a huge revelation. According to an RTI question submitted by Pune social activist Prafulla Sarada, the Union Finance Ministry has so far spent only Rs.7 percent for this purpose. Responding to a May 13 RTI question, the Union Finance Ministry said that while the budget of Rs 21,360 crore had been approved, only Rs 1,540 crore had been received from the National Health Authority (NHA). Prafulla Sarada, a social activist, complained that India had been fighting against the corona pandemic since March 2020 and that the country's largest public health schemes... ▶ Page-3

Is Government in state of dormancy ?

'Janabadi' Bureau Review

In the second wave of the corona pandemic, people's lives are being ruined. No sleep in the eyes at night, hunger is interfering with the fear of pandemic. From education to health, from industry to agriculture, there is deep crisis. According to the National Commission for the Protection of the Rights of the Child, 30,071 children are orphaned in the country during the corona pandemic. In Odisha, the number of orphans is 1,073. The third wave is expected to increase the risk for children. Although the incidence of corona disease is declining, due to the lack of treatment, patients are dying. This questions the government's set up. According to the Ministry of National Statistics, the country's GDP was estimated at Rs 135 lakh crore in the financial year 2020-21. This was Rs 145 lakh crore last year.

This is the first time after the year 1947 that the economic situation has deteriorated. The fiscal deficit is 9.3 percent. The central government has privately handed over dozens of government companies. The unemployment rate has risen to 12 percent. The industry is shutting down. More than 2 crore people have lost their jobs. Last year, 10 crore people lost their jobs. Suicide rates have risen by 4 percent. Negative picture has been seen since the change of agricultural law. Averages of 80 farmers commit suicide a month. In addition, the number of crimes in the country and the state is increasing. There are millions of vacancies in government services. In the private sector, there are lay-offs. The inflation rate has risen to 10.49 percent. Food prices have risen

sharply. According to official figures, 3 lakh people have died in the country, while the numbers of deaths from non-governmental data deaths have risen to 40 lakh. Such are the published Data. However, this is not officially accepted. But the news of death every day has created an atmosphere of terror. Whether in Odisha or other states of the country, more and more people are dying due to lack of proper medicine due to lack of oxygen, lack of ventilators. This has led to nationwide outcry, including in Odisha. At this point the government is only providing medical services in publicity! The big challenge today is, when the government will free itself from the state of sleep and provide appropriate medical care to the people, protect them from death and protect them from starvation?

Farmer's agony

Ploughing land: Brothers turn into oxen !

'Janabadi' Bureau Review

The corona pandemic has created a crisis for all sectors. The farmer could not get rid of it. The farmer's waist is broken. The government's plan has not empowered farmers. An example of

this is found in Bargarh district. Now the government has announced lockdowns and shutdowns for the second wave of

corona. This has had a direct impact on farmers. The situation is such that three brothers from a farming family have plowed their farm by

themselves. The scene was reported in Machhimora village in Sohela block of Bargarh district. The village's Balmiki Pradhan is completely landless. He has six sons, two of whom... ▶ Page-3

Tribal food: Harmful porridge !

Fermented porridge is being consumed to fight the hunger. The Dangria Kandhas of the Niyamgiri hills in the Kalyansinghpur block of Rayagada district are still consuming the dried stalks of the salpa tree. A porridge prepared from the seed flour."It's inedible and can spread diarrhoea," BDO said. Indigenous peoples collect small pieces of dried willow trees and beat them. The dried pieces are ground into fine powder; sun-dried and then consumed it by soaking in hot water One day. ... ▶ Page-3

Editorial

Dreams : implementation

Before 2014, there was insufficiency and corruption in the country. Post 2014, during the election, Prime Minister Narendra Modi after coming into power promised the people that 'good days would come'. His promise was that black money would return and that, if the enemy chopped off one head against India, India would chop off ten heads in retaliation. Neighbouring countries such as China, which is terrorizing India, will be ended. After taking over as prime minister, Modi promised corruption would end, inflation rates would reduce, bullet trains will run, everyone will be in harmony with each other, every citizen will get 15 lakh after seizure of black money, 2 crore appointments will be provided, such endless dreams were shown by Modi. After his coming into power, demonetization was done in the country. Modi also implemented the GST. The Planning Commission was abolished. There have been instances of love jihad in the country, as well as mob lynching. Section 370 was repealed, and foreign policy failed. Pictures of the devastation were seen nationwide. The GDP declined, meaning that the gross domestic product (GDP) did not move forward. Small businesses were closed. The industry was shut down. Exports declined. Investors did not have faith. The plight of the peasants increased. Employment and livelihood were cut off. According to the central government, no such pandemic has been reported in India in the last 100 years. But in India, Indians witnessed epidemics such as measles and cholera in 1948. The vaccine was administered at this time. Vaccination was also conducted in 1955-56. The vaccine was developed by established serum India Company, British scientists in 1966. At that time, India's budget was Rs 500 crore. But there was a free vaccination campaign against deadly measles and mumps. This is called the BCG vaccine. Indians have seen more than two dozen epidemics in the last 100 years. Such as Spanish flu or small pox, measles, polio, malaria, plague and cholera. The Pastier Institute of India built the Influenza Vaccine in 1957. Diphtheria and polio vaccination were given along with Tetanus in 1971. According to sources in the US National Library of Medicine, the hepatitis vaccine was also given in 1991. During this time, India's GDP was not high. Today, the country has made great strides in the field of science, with new inventions, but Prime Minister Narendra Modi has addressed the nation, saying that the Indians have not seen a catastrophe like this or today's corona plague in 100 years. In other words, India has not faced such an epidemic in 100 years. But the reality is that India has faced more than two dozen epidemics since the 100 years and also managed to get vaccinated. Today, as the pace of development is being beaten, the country has not been able to take immediate steps to vaccinate against the epidemic. Dreams are existing, but the distance looks wide. The image of the devastation is everywhere from the village to the city. Lockdown has been implemented to save people's lives since the seizure of notes. In a situation that has plagued all states, including Odisha, for the past 14 months, it may not have happened in 100 years. In the first wave of the corona, Prime Minister Modi addressed the nation seven times. Sometimes for public curfew, sometimes for applause, sometimes for lighting lamps, sometimes for lockdowns, and sometimes for Aatma Nirbhar campaigns. As Prime Minister of the country, we do not oppose the address to the nation. But changing the standard of living of the people, this address to ensure development is not realized. On Monday, only those over the age of 18 will be vaccinated, with all the cost of the vaccine being borne by the central government. It was promised that ten lakh people would be vaccinated in the country every day. But corpses are seen in various parts of the country. The sensitivity of the corpse and the government is being questioned. It seems the government is playing with the lives of its citizens. Addressing the nation alone has helped shape its image. In fact, farmer, worker, farmer, student, young man, no one is in good condition. Some have lost their jobs and someone is losing their livelihood. The unfortunate picture of not having access to health care. In the case of Odisha, there is a lack of government treatment for critically ill patients. The ECMO treatment is not available, and air ambulances can accommodate patients from Hyderabad, Chennai and Kolkata. The cost of an ambulance for this is only Rs 30 lakh. From Rs 1 crore to Rs 1.5 crore for the recovery of the patient. Hundreds of patients who do not have access to this facility are facing death. Who is responsible for this, Prime Minister Modi should speak? Who is responsible for providing medical care? If not, then the government is the killer. No attempt should be made to shift the responsibility from one head to another during the pandemic. Patients are dying because of government failure. So the government no longer should show us mere dreams.

Satyagraha : Liberation of Mother Earth

From soil to the mother to the soil, united, equal & of the soil is very indestructible. The contains the seeds which are always gives birth and children; the soil vegetation, the

Prafulla Samantara

& animals. The creation of springs as a continuous stream of love, reverence and affection from the soil. Although the soil contains many varieties, it does not differ in nature, although it has differences in colour; Different colours have special properties, and fragrance does not have to be addictive. Wherever any seed is sowed, the soil takes care of it without confusion, to reap the harvest. In the same way a mother gives birth, breastfeeding for her child is divine medicine. Mother's milk of different categories is also a source of energy. Mother's love and affection are timeless. Mother Earth is always responsible for shaping the lives of their own children and species. Mother or soil never disrespects anyone. All living things, biodiversity, and flora depend on soil and vegetation. However, her physical illness has been linked to the fact that the soil's natural fertility has not been exploited, creating more productive energy. It's only a matter of time before profits are made by companies who are trying to manipulate nature.

As a result, in many places the soil has lost its own natural fertility and become infertile. Numerous allied bacteria in her body are disappearing. These worms, such as cockroaches, and many others, which fertilize, survive on saliva and feces. But in the name of the Green Revolution, the natural fertility of the earth has been eroded by the use of excessive chemical fertilizers, destroying the true fertility of the soil. The soil is becoming more toxic after the stability of the living bacteria inside the soil has waned. The toxic properties of all the fertilizers that help grow the crop remain in the food grains. The result is that the public is forced to eat poisonous food. Many diseases, ranging from health to cancer, are spreading. The impact of the disease on the human health and the environment has had a devastating effect on the environment. Nitrogen gas is produced by the use of chemical fertilizers. As far as the atmosphere goes, the soil also loses its ability to absorb carbon dioxide. The need for water for crops is increasing. The moisture content of the soil dries up. On the other hand, natural resources are being looted by unexplained mining, and greenhouse crops are being turned into waste areas and climate change is being called for. Soil is being traded for corporate profits. All of this contributes to global warming. Therefore, comprehensive efforts are needed to restore soil health. Its efforts continue in many parts of the world. Although it has been successful in the local and personal field, it has not been widely used. Because there is a lack of confidence. Therefore, a comprehensive change in the national agricultural and food policy of the countries is essential. With the restoration of indigenous farming without agricultural reform, scientific know-how has been made available to the farmers...

If possible, the general public will take the initiative. It is also important to free agriculture from competition. But in ...

THE REST OF PAGE-1

Ayushman Bhara...

had failed miserably. Sarada blames Finance Minister Nirmala Sitharaman for failing to release the funds. According to RTI data, the Ministry of Finance had to provide a total of Rs 21,360 crore to the National Health Authority (NHA) in four phases. Of this, Rs 2,160 crore was to be released in 2018-19 and Rs 6,400 crore in 2019-20.

Therefore, Rs 6,400 crore was expected to be disbursed in 2020-21 and 2021-22. Of the Rs 21,360 crore, only Rs 1,560 crore has been disbursed in the last four years. According to Sarada, the Finance Ministry has allocated only Rs 385 crore annually for the PMJAY. The Indian government has been forced to spend billions of rupees on oxygen, ventilators, beds, covid care centres and vaccines. Sarada claims that if the money had been paid to PMJAY on time, the current situation in the country would have been different. He called on the government to set up a committee to implement the plan. Ayushman Bharat PMJAY was launched in September 2018. The scheme would provide health insurance of Rs 5 lakh per annum to 10 crore people. In July 2019, Union Health Minister Dr Harshvardhan claimed that about 10.74 crore poor families in the country had been covered under the Ayushman Bharat scheme. The National Health Insurance Scheme, launched by the UPA government in 2018, was also included in the scheme.

Ploughing land...

have gone to Tamil Nadu to work as migrant workers and are stuck in Lockdown. At home, four sons work for other people and support their families by farming on other people's land. By keeping the future in mind, they are ploughing the land by themselves. Working hard because of corona lockdown. In other words, the plow itself has been cultivated on half an acre of red chillies. All members of the family have cooperated. Of the three brothers, Ranjit was born paralyzed. After matriculation, he enrolled in the Bargarh Diet for City Training. All educational institutions are now closed due to corona. So despite his disability, the lack of a family has dragged him into farming. In the rural areas, on the other hand, they have appealed to the government to provide assistance to the poor farmers as government assistance is now inaccessible. Akshay Pradhan, a brother, said, there was a shortage of money. "We thought we would do it ourselves. Feeling we have 'Run out of amenities' emotionally, we set ourselves as oxen and plough the field with our brothers. However, the sight of a farmer working as oxen for his earning has become a hot topic in the area.

Tribal food...

Dangria Kandha, an indigenous tribe, eats this salapa with wild vegetables. In Rayagada district Kalyansinghpur block Niyamgiri hills area Parasali panchayat, such scene is seen. A special department of the government, the Dangria Kandha Upliftment Agency, was set up in 1986 to bring Dangria Kandha, a rare indigenous tribe living in the Niyamgiri hills between Rayagada and Kalahandi districts, to the mainstream and strengthen their financial position. In 2017, another section was added. That section is the "Odisha Particularly Vulnerable Tribal Groups Empowerment and Livelihoods Improvement Programme." That is, OPELIP. The Odisha government is providing crores of rupees to this department. It is run by "Far Muniguda", a voluntary organization. It is true that the two departments have been spending crores of rupees for the development of the people of the two regions, but they are still living on inedible food like salapa jau or fermented porridge. It is inedible. But Dangrias are eating it. "So I went and warned them not to consume it," said Kalu Charan Nayak, group development officer. Department has avoided allegations of money laundering in the name of improving Dangria Kandha, an employee of the DKDA and OPELIP departments.

THE REST OF PAGE-2

the capitalist world market, it is not easy to free agriculture from the greed of food traders. But it is only a matter of time before the campaign continues.

Even today, in many parts of the world, small-scale farmers are not being promoted with medium-sized farmers. As many as 85 per cent of farmers in large countries like India are small and marginal farmers who own less than five acres of land. Sixty percent of the population is dependent on agriculture. Therefore, the protection of agriculture and the control of the company must be ensured and the release of agriculture and farmers. At present, the central government has enacted three anti-farmer laws to control the distribution of agriculture and food distribution to the entire company, including the process of transferring agriculture from farmers to companies, which is underway in the country, especially in Delhi, across the country. The main theme of this peasant movement is the protection of agriculture which is related to the soil. Thousands of years of human civilization have developed over agriculture. Agriculture is dependent on soil and water. So the protection of the soil is the protection of agriculture. Livelihoods and food security are guaranteed. Farmers, like earthworms, are human beings. The soil is his mother. The soil is tilted and struck on the head. The company has a conspiracy to hand over agriculture, which is why the law on contract farming, the introduction of

private markets. Farmers have come to the realization that with the advent of agriculture, there will be a trade in soil. The land will be gone; the fertility of the land will be eradicated through company cultivation. Today, Punjab, Haryana and western Uttar Pradesh are facing a rebellion in every peasant household to maintain the mother's milking ability to protect that soil and be constant, which ranges from Maharashtra across the country to Madhya Pradesh, Rajasthan, Gujarat, various states of South India, including East Odisha, West Bengal and Odisha. "It simply came to our notice then. The need for today's historic national peasant movement has become essential. The slogans "Save the soil, save the agriculture and save the country". The closeness of agriculture to many cultures has inspired many activists. Through the Soil Satyagraha Yatra, soil has been collected from various villages and historic sites in the country and dedicated to the construction of farmers' memorials at Shahjahanpur, Tikiri Board, Ghazipur and Singhu Board, which are being held around Delhi. The history of Mother Earth's Independence Day is associated with the memory of Mother Earth's love and affection. The birthplace of those who have been martyred is also a source of inspiration to break the chains of motherhood. Today, that is why Mahatma Gandhi's salt Satyagraha is the birthplace of Dandi, Sabarmati Ashram, Sardar Patel, Shahid Bhagat Singh, Shahid Uddharma Singh, Shahid Chandrashekhar Azad, the birthplace of Vir Surendra

Sai. Today, this sacred soil is a symbol of great respect and strength for liberation from world imperialism; nature-destroying capitalism and communal fascism, as the blood of the martyrs and the sweat of the mother earth are very fragrant in the sweat of the workers.

That soil is worshiped by all of us today as the soil or Basudha that encompasses the whole of nature. "The protection of nature is the protection of the people." The climate change crisis has put Basudha on fire. Therefore, for a cold world, the fertile soil and all its green nature, the constant flow of clean water, the springs, the air and the sky are invincible. In 1912, Nobel Prize-winning scientist Dr. "Alex Keril and the prophecy say that the modern agricultural system that is destroying our health will be devastating." Today, 109 years later, the world capital markets, the World Bank and corporations are working together to make the soil toxic and turn it into commodities.

The liberation movement of the soil-water-wind is absolutely essential to get rid of that market system. In May 2019, eleven thousand scientists from 153 countries around the world called on the heads of state to implement four recommendations to prevent climate change. It includes land-forest protection and chemical fertilizer-free cultivation; this means that a change in policies and plans, including judgments and actions for the protection of the motherland, is solitary. That is why the liberation of Mother Earth is the only way.

With great power comes great responsibility !!

Rabish Kumar

The entire responsibility of the vaccination campaign will now be borne by the Government of India. Addressing the nation on 7th, Prime Minister Narendra Modi said that from June 21, 25 per cent of the vaccines bought, the centre would buy and give to the states. All people over the age of 18 will be given free of charge. The quota of 25 per cent of private hospitals will remain the same but services charges will not be above Rs 150.

Before saying this, the Prime Minister blamed the states for the current situation. "From January 16 to April 21, a vaccination campaign was underway, but different voices were heard from the states," he said. Therefore, it was decided on May 1 to hand over the responsibility of vaccination to the states. The prime minister did not comment on the value or accuracy of the information which was allegedly leaked to the media. The states were given only 11 days to implement it. It was announced on April 19 that the vaccination campaign would be launched by the state government from May 1. How little time was given to the states? Not only that, the government had promised in the Supreme Court that 50 per cent vaccine centres and 25-25 per cent state-owned private hospitals would be bought from Indian companies. But the quota center will decide how many vaccines the state will buy. Not only that, the states had to shell out more bucks for vaccines from the center. This policy was created by the Center. But the blame rests on the states themselves. The state government has set aside Rs 35,000 crore to buy vaccines. Where did that go?

Not only were those, the states left to buy vaccines in the global market. State governments have not failed to meet their responsibilities, but the vaccine has to be bought at the center. No foreign company has agreed to vaccinate the state government. Wanted a legal guarantee from the center. The Center had to consider all these aspects before the pressure of the state governments came upon them. Opposition chief ministers Ashok Gehlot, Arvind Kejriwal, Naveen Patnaik, Pinarayi Vijayan, Hemant Soren and others have been vocal in their opposition to the recent global tender, which has led to a drop in the number of Indian companies. The Kerala Legislative Assembly passed a resolution calling for the Center to buy the vaccine. No state legislature has passed a resolution calling for the federal government to vaccinate. Naveen Patnaik did not write letters to the states. On June 5, Rahul Gandhi first said that, let Center buy and distribute vaccines. The prime minister acknowledged it, but put the onus of responsibility on states.

On April 19, Mamata Banerjee wrote that the state should be given the responsibility to buy the vaccines. The state should buy vaccines from its own funds. The Punjab Chief Minister also said that the state should be allowed to develop its own vaccination policy. The prime minister has said in a statement that the state government will change its stance a few days later. On April 19, the Center shifted its immunization responsibilities to states, but one day, former Prime Minister Manmohan Singh wrote a letter to the Prime Minister.

Manmohan Singh writes that the central government should clarify which vaccines are expected to arrive in the coming months. Vaccines should be ordered from the very beginning. Ten percent of vaccines should be kept for emergencies. But how the rest of the vaccine will be used regarding that, state should plan exactly as well. "Immunization will be the first thing that happens to states," he said. Even if people under the age of 45 are front-line workers, the state government has the right to vaccinate anyone who wants to be vaccinated. This freedom should be given. So that more and more companies can produce vaccines, Compulsory licensing provisions should be implemented. In addition, the vaccine which has already been approved by reputable organizations outside the country, they should also be allowed to come to India.

Manmohan Singh wrote a letter on April 18 proposing that the central government grant other companies the right to produce vaccines as per the mandatory licensing policy. The federal government has a long way to go in understanding this. "India Biotech is ready to share its patents with some companies," said VK Pal, policy director, on May 17. Now only the government can say how much progress has been made in this case. Not only that, the government has enough to give manufacturing rights to other companies, even though India Biotech has a patent, the Indian Council of Medical Research (ICMR) delays. The Aam Aadmi Party (AAP) and the Congress say the central government has come out of its sleep mode over the Supreme Court's questioning.

The prime minister did not comment on the information regarding announcement of vaccination on May 1. Those companies who had the ability to buy 50 per cent of the vaccine got the first dose, but they did not get second dose. Even today, many have not received a second dose. So the time limit between the two doses was extended to three months. The vaccination campaign has raised questions - what was India doing when the world's largest countries bought vaccines last year itself? The prime minister did not immediately respond to the comment, but rather said, the government was relying on scientists in its country who were busy in dispensation of the vaccines. United States bought vaccines from other countries, this does not mean that they had little confidence in the scientists of their own country.

Did the central government save itself from responding to the Supreme Court today with this decision! This is the thing. The Supreme Court has directed the central government to file a case in court regarding the vaccination campaign. The court asked for information on when the vaccine was ordered and when the advance payment was made. The apex court ruled that the central government's policy of vaccinating people between the ages of 18 and 7 had no basis in fact. The government should provide information on any record of purchases of Covaxin, Covishield and Sputnik V. How many doses were ordered to be purchased on each date? What was the date? The Supreme Court asked the government to present all such information.

The issue's end has the recaptured Doomsday in the control of the government and the cemetery. The prime minister did not comment. Opposition parties have stated that, information on number of corpses was not correct. Even so, the center remained silent. The prime minister called the corona as "the greatest plague of the century." But when the Spanish flu was reported in India in 1918, more than two million people died. By what standards does the Prime Minister call it the biggest epidemic of a hundred years! It was hoped, the prime minister would not have hidden the death toll. But he did not say anything.

The Prime Minister clearly said that, thousands of crores of rupees had been provided to Indian companies for clinical trial, research and development. Are thousands of crores really given? The affidavit filed by the government in the Supreme Court on May 9 states that Serum Institute and Indian Biotech have been given Rs 46 crore for clinical trial. In the affidavit, the central government says the two companies have not been paid for vaccine research and development. In addition, Covaxin manufacture is based on the PPP model. In this, both ICMR and India Biotech are equally involved.

Is this thousand of crores? The government has said no money has been paid for research and development. But the prime minister says billions of dollars have been paid. Not for research and development. Whatever is given is for the production of vaccines, the central government has said in the Supreme Court. Yet the Prime Minister said quite simply - thousands of crores have been given.

The vaccine was developed as a result of a technique that scientists at the University of Oxford have been working on for 20 years. The Guardian reported that 97 percent of its research and development funding came from the Public Fund. Out of the Rs 1,000 crore received by Oxford, majority was paid by the British taxpayers. This means that the research has been going on for two decades. The UK government, the Wellcome Trust and the US and European organizations have also made significant contributions. Covishield's intellectual patent is owned by 'AstraZeneca'. That is why most of Serum's vaccines have to be sent to

England. Covishield has sub-patents near Serum. In this case, the question arises - what is the contribution of serum in the development of covishield vaccine? Did Serum only manufacture or conduct research on vaccines as well ?

The Prime Minister has repeatedly emphasized the need for phased vaccination. But if everything was in such a state, why was there a sudden crisis in May? The prime minister did not say whether the states had been vaccinated more after May or less than before. Of course, the crisis was unprecedented and unimaginable. It was in Delhi that the medical system faltered within a week. The Center definitely allowed the state to be vaccinated, but took full control of the vaccine procurement. Despite pressure from state governments, vaccinations should not be abandoned in the middle of the second wave. That wasn't the right time. The prime minister said the government had been preparing logistics since April when scientists were doing research. But records show that the first meeting of the Tax force for distribution and storage took place on August 12. The name of this tax force is NEGVAC. On June 3, the Indian government announced that it had awarded Rs 15 crore to Indian company Biological-E. Thirty crores for dosage. On June 3, Union Health Minister Dr. Harsh Bardhan tweets that the Indian government has signed a contract with Biological E for Rs 30 crore. Biological E, the vaccine is in its third phase of the trial. An advance of Rs 1,500 crore is being provided for vaccination between August and December. This shows that the government, led by the Prime Minister, is committed to fighting against Covid. The Indian government is backing the vaccine that Biological -E is developing before the trial begins. According to 'Mission Covid'.

All countries began to order vaccines at the trial stage. Countries such as the United States were involved in May and June. If the vaccine had been ordered in the trial phase, it could have been done last year. Or else such tragedy would not have taken place. As soon as Dr. Harshvardhan spoke, the headlines of the News website began to fade and we began to write carefully. As soon as the June 3 press release came out, many Hindi and English news outlets wrote on their websites and newspapers - "Made in India". Words like 'Amar Ujala', 'Prabhat Khabar', 'Hindustan', and 'Made in India'/'Swadeshi were used.

Many news outlets, including the Navbharat Times, have not written 'Made in India'. The health minister did not say "Made in India" in his Tweet, but the Government of India's Press Information Bureau described it in a statement as part of a campaign to protect 'Atma Nirbhar Bharat' and the 'mission covid'.

Both the company and the government should make it clear that, which Rs 30,000 crore dose is given for the Rs 30,000 crore doses, that is Made in India. Is it developed according to the self-sufficiency campaign or is it the partner of other countries in its development? Here you are going to understand another game. It was only on May 13

that the government announced that it was buying biological E. And why does the government make a statement on June 3? Isn't this? An advance of Rs 15,000 crore was announced. At that time, on May 13, the contract of Rs 30 crore was signed without money? The government should pay attention to the statement on June 3.

Needless to say, the media is indigenous to Madhya Pradesh, and now we are taking you to the website of Biological E. The company released a press release on April 24. This press release does not come from any laboratory in India. Dr. Beller of the American College of Medicine. According to Maria Elena Botaji. It was in Texas that Prime Minister Modi went to a rally in support of Trump. The children's hospital there is a Center for Vaccine Development Center. And that center has developed vaccines. Whose only trial is going on in India. Dr. "Our vaccine trial has reached the third stage, which is important in terms of the importance of protein-based vaccines worldwide," says Maria Elena Botaji. The vaccine builds confidence in undeveloped countries.

A June 3 press statement said the Indian government had given Rs 100 crore, but the company's website, or the Website of Beller College, said that some money had been paid by the Indian government. The rest is funded by the Bill gates Foundation and the CEPI Coalition for Epidemic Preparedness Innovations. This means that the vaccine that the biological vaccine is making is not indigenous. The press release on the company's website is dated April 24. Just three days earlier, on April 21, Dr. V.K Pal "The biological vaccine is being developed with the help of the Government of India," he said.

VK Pal called the biological-e as a manufacturer company. That means someone else has developed the vaccine. The name of the manufacturing company is Biological-E. But is the vaccine being developed only with the help of the Indian government? What can be done to ensure that other countries and institutions are involved in the development of the vaccine?

The Times of India and the Indian Express wrote that the development of the vaccine, which is being produced in Biologically-E, has been carried out by an organization in the U.S. city of Texas. The organization is called the Texas Bellar College of medicine Center. The center developed a vaccine technique during the SARS wave, which was not used after the SARS stopped. On that basis, efforts are underway to make Covid vaccine. Due to lack of funds, the work was slow. At the time, a Texas-based brewery paid for some of the work, and several other companies paid for it. The statement from Dr Peter Hottiej, the company's chief operating officer, stated that the company did not believe in patents. Make all your information public so that low-income countries can use it. The government should state how much vaccine Biologically-E will produce and how much right India will have on it. Imagine for a second you were told in newspaper it is your own country's vaccine, which is not infact.

TRIBALS : TRAVEL 12 KM WILD ROAD FOR ROCURING RICE

Devgarh (Bureau): There are many government schemes for the development of underdeveloped and inaccessible villages. The cost of the expenditure is crores of rupees. Despite this, no government facilities have been accessible in the village of Gurandikhhol in Rambhei panchayat under Barkot block of Devgarh district. The villagers do not even have access to basic amenities such as drinking water and electricity. When a person is sick, he or she is carried to cross 2 hills and 12 small pot holes or canals and tread a 12-kilometer-long ditch and brought the patient in bed. The village is home to about 20 families of the indigenous paudibhuyan tribe. All tribal families belong to the BPL class. They have received government orders to build houses; how-

ever, due to the inaccessible roads, sand, cement and bricks could not reach, and houses could not be built. They cross 12 km of wild roads to fetch government rice. And because there are no schools in the village, the children are illiterate. It is surprising to hear that there are such villages even after so many years of independence.

Due to the lack of roads, the ambulance could not reach the village of Gurandikhola. The patient is being brought to the hospital with a bandage tied to the cot. They are travelling 11 km to the

panchayat office to fetch the allowance. The children are left unattended as there is no teaching infrastructure in the village. The villagers are suffering from various diseases by using contaminated water from wells as there is no safe drinking water system in the village. Since there is no way to earn a living, the villagers collect paddy leaves, mahogany, kendu, etc. from the forest and travel 12 km down the road and sell whatever they are earning in the market. It is not possible for the villagers to carry all the rice even if they come to the Ramvei Panchayat office to

collect government rice. So they come to the weekly bazaar every Monday to take the rice for sustaining the whole week. The villagers have complained to the elected public representatives, including the sarpanch, the BDO district magistrate, about such serious problems; but there are only promises. A few months back, the Prime Minister's Housing for 12 BPL families in the village was approved; however, due to the lack of roads, the construction of houses, such as sand, cement bricks, etc is not possible.

The people drew the attention of Barkot's BDO Tunu Meher, he acknowledged the villager's problems and said that there was no road to the village of Gurandikhola and that there could be no road construction due to the protected forest.

Which policy is this by the government ?

Narayanpur residents:- deprived housing scheme

Kendrapara (Bureau): Both the central and state governments say there will be no thatched houses. All eligible ones will get a permanent/pucca home. Even if the Socio-Economic Survey does not exist for any reason, they will be provided with housing on a priority basis if they qualify. But the government's slogan and rule has become a smoke cracker for the villagers of Narayanpur, the Tikarpanga panchayat in the Mahakalapada block. About 200 Scheduled Caste families in the village have been deprived of their housing schemes for many years, while government officials have remained silent, showing an excuse that there were no names in the Socio-economic survey list. As a result, the housing scheme for the downtrodden has become a nightmare. Pratap Mohanty, a social activist, called on the commission to intervene in such a sensitive case and called on the beneficiaries to take exemplary action against the government housing scheme and the culprits. Notably, this Narayanpur

village in Tikarpanga panchayat has been neglected for years due to government negligence. As many as 200 Scheduled Caste families are living in dilapidated houses, and for them, government-run permanent housing is a dream come true. Locals rushed to the administration, but government officials did not show remorse. As a result, they have not benefited from the housing scheme.

This is because the district administration does not have the Socio-economic survey report of the 2021

census in the village. Locals today are being deprived of their housing schemes due to such irresponsible and careless attitudes of government officials in terms of basic needs of people like housing.

Surprisingly, the authorities have not been able to respond to a request for comment on the Socio-economic survey's response to the allegations. The villagers have repeatedly complained to the district magistrate about this, but to no avail. As a result, the state and central governments have made everyone's

house a slogan for the two hundred oppressed families of Narayanpur village. The basic question that is troubling everyone in such a situation is where did the Socio-economic survey report of the people of Narayanpur village go? Has there been a government conspiracy to deprive these oppressed families of their plans?

On the other hand, a notification issued by the Panchayat Raj Department in 2020 has made it clear that if the names of eligible beneficiaries are not on the socio-economic survey report list, they should be listed and included in the housing scheme. However, officials in charge of the department did not respond to a request for comment. The petitioner, social activist Pratap Mohanty, has been handed over to the Odisha Human Rights Commission against the negligence of the government officials as well as action against the guilty officials. The petition seeks to include the eligible in the housing plan immediately.

Kamar's family is living in misery

straits. With business declining, it has become difficult to add two handfuls of grain to the family's stomach. Corona has broken the backbone of the

Nabarangpur (Bureau): Corona has devastated the country. The pandemic has affected many lives and livelihoods. Many are struggling to get a few morsels of grains into their stomachs. Livelihoods are at stake for life and the stomach. Everyone from the general public to the poor people are in a critical condition. About 50 families from Nabarangpur district have not been saved by the corona wrath since two years. Lockdowns and shutdowns in the state have closed their businesses.

family. The blacksmith earns a lot of money by selling those things in the hot market. But for two years, the invisible virus has locked Kamar family's business. As the market is closed, the blacksmith earns two cents from all the work he gets at home. It is difficult for a blacksmith to run a house with so less money in an expensive market. Many blacksmiths now claim that God is the only hope. "Especially during the corona pandemic, the government is helping the needy." However, this black community is far from

government assistance. Kamar needs to look to the government during this time. On the one hand, the Corona pandemic, on the other hand, poverty has become a curse for them. The government must intervene immediately.

The plight of a blacksmith who earns two pennies by selling iron goods is now in dire

Is this our Independent & self-reliant India ?

Tribals begging for water

Malkangiri (Bureau): The state and central governments have developed a number of schemes for the tribals. However, the people have not yet been benefited from it. In the Malkangiri subdivision of Khod, 30 indigenous families are desperate for water and go door to door in the neighbourhood begging for water, and it is easy to see how desperate the administration is for development of these poor tribals. About 30 labour-class families have been living near the canal on the way to the Mallikeshwar temple in the Malkanagar sub-

division for years. They have been living in slums along the canal side. Government facilities are inaccessible to them. One rupee rice and some elderly people are receiving allowances. Everyone belongs to the labour

class. Indigenous women collect firewood from the forest, while men support their families in fooding and other work. For many years now, they have been plagued by drinking water problems. Their lives are spent on the

drinking water. The plight of the tribal slums under the municipal council is a reflection of the indifference approach of the government and the district administration. Such a tarnished scene is this.

NOBLE WORK OF HUMANITY: CHINMAYI, THE TRANSGENDER !

fear of infection. With such strong morale and courage she is found cremating the body of her relative.

Where there is a corpse there Chinmayi is present, such rumour is spread in Angul. If Chinmayi finds out any corpse is lying, he immediately arrives to conduct the funeral rites. He approached the body of an unidentified man. Chinmayi cremates with his body on his shoulders. So far, he has paid tribute and done funeral rites of more than 25 people. Not only this, if there is no one available near an ill person he takes him to hospital and also arranges for the oxygen & medicines. Chinmayi is roaming around making people aware. Chinmayi has made

a name for himself in the local area by doing a lot of work for helpless patients by taking care of them in a timely manner. Not only in the local area, Chief Minister Naveen Patnaik also called and thanked Chinmayi for his service and philanthropy, tweeted and praised his great work. Five secretaries, VK Pandian and Angul district commissioner also

congratulated Chinmayi for the noble work. "This commendation, from the chief minister to the district magistrate, will inspire me to serve even further," Chinmayi said. Chinmayi has taught the society the true sense of humanity and responsibility, which in fact the society ignores, despises the natural calamities that befall any individual or race.

Angul (Bureau): 'People disrespected me because I am transgender, but I would never disrespect anyone. I can't even see the disrespect of any dead bodies in front

of me.' Kinnar Chinmayi Das of Angul is cremating the body of a relative who passed away in her family due to corona or could not walk to her relatives for the

Dream come true: Pucca house, ineffective promises

Cuttack (Bureau): The government has numerous schemes for the poor. But that is like a dream come true for Rohit Bhoi of Bamburi village in Kanderpur panchayat of Cuttack district. The housing scheme or Awas Yojna has become a dream come true for him. Rohit,

his wife and three children are living in a dilapidated house. The walls of the house are filled with cracks to such extent that the sun is visible during the day and the moon at night. You can understand how successful the government's financial schemes are.

Persecution of hunger : Corona pandemic

Koraput (Bureau): The fear of starvation has become unbearable for the family of Yamuna Muduli. Her husband worked as an evacuee in Koraput and ran a family of four children. But since the death of her husband last year, the family has been in a state of shock. Since her husband's death, she has been bedridden since last October when she fell while working. Poor Yamuna tried to take care of

her family at home.

It has not been possible to pay rent for the past nine months due to the closure of income. Home owner Radhamani Takiri, however, is waiting for the family to return to their normal lives. The bedridden Yamuna tried to run the house by selling whatever was in the house. But how long will that last? The gas cylinder is also exhausted. Family, financial barriers to purchase

pulses. The only hope is the government's ration card. What is received is only by begging, is some rice.

In the end, the situation was such that she broke the wooden sofa in the house and continued to cook rice on the wood she got from it. After learning about the situation of Yamuna and her family, Simanchal Mohapatra, the district social security officer, promised to help.

The family, which is relying on the government, will help them stand on their own two feet. The four children are expected to go to school again to get an education.
